# TERMS & CONDITIONS OF SALE

## AGREEMENTS:

All agreements are subject to availability of material, strikes, accidents, or other causes beyond our control.

## WARRANTY:

We warrant for one year from date of shipment our manufactured products to the extent that we will replace those having manufacturing defects when used for the purpose which we recommended. If goods are defective, the amount of damage is the price of the defective goods only and no allowance will be made for labor or expense of repairing defective goods or damage resulting from the same. We warrant the products we sell of other manufacturers to the extent of the warranties of their respective maker. This is the seller's sole warranty. Seller makes no other warranty of any kind, expressed or implied; and all implied warranties of merchantability and fitness for a particular purpose which exceed seller's aforestated obligation are hereby disclaimed by seller and excluded from this warranty.

For special order products made to the customer's specification, warranty is not valid and we are not responsible for load requirements or liable for damages incurred from product failure.

## CLAIMS:

No claims for shortages allowed unless made in writing within ten days of receipt of goods. All goods sent out will be carefully examined, counted and packed. Claims for goods damaged or lost in transit should be made on the carrier, as our responsibility ceases on delivery to the carrier.

## SPECIAL ORDERS:

Orders covering special or nonstandard goods are not subject to cancellation except on such terms as may be agreed upon.

## TERMS AND DESIGN:

Subject to change without notice. Refer to current price list for terms of sale. PHD reserves the right to revise product design without notification.

## RETURNS:

We cannot accept return of any goods unless PHD's written permission has been first obtained, in which case same will be credited as follows:

- 1) All goods must be received in our plant in first class condition, if not, the cost of putting in salable condition will be deducted from credit.
- 2) Twenty-five percent (25%) will be deducted from credit memoranda issued for handling and restocking, less any charges allowed or paid by PHD Mfg., Inc.
- 3) Goods must be returned prepaid.
- 4) P.O.A. items cannot be returned.
- 5) There will be no returns of goods after one year from purchase date. Customer must provide invoice number.
- 6) There will be no return of goods under \$50.00, unless it is the result of PHD's error.

## TAXES:

To the price and terms quoted, there will be added any manufacturer's or sales taxes payable on the transaction under any effective statute.

## MINIMUM INVOICE:

\$50.00 plus transportation.

## FREIGHT ALLOWANCE:

All prices are F.O.B. point of shipment. On shipments of 2500 lbs. or more, rail freight or motor freight at the lowest published price is allowed to all U.S. highway points listed in published tariffs (Hawaii and Alaska excluded).

## TERMS:

Net 30 days. Monthly settlements on all accounts. One and-a-half percent (1½%) per month or eighteen percent (18%) per annum will be charged on all past due accounts, starting on the 31<sup>st</sup> day after the date of invoice.

## DIMENSIONS & WEIGHTS:

Although PHD Manufacturing tries to be as accurate as possible, all listed dimensions and weights are an approximation and are not guaranteed.

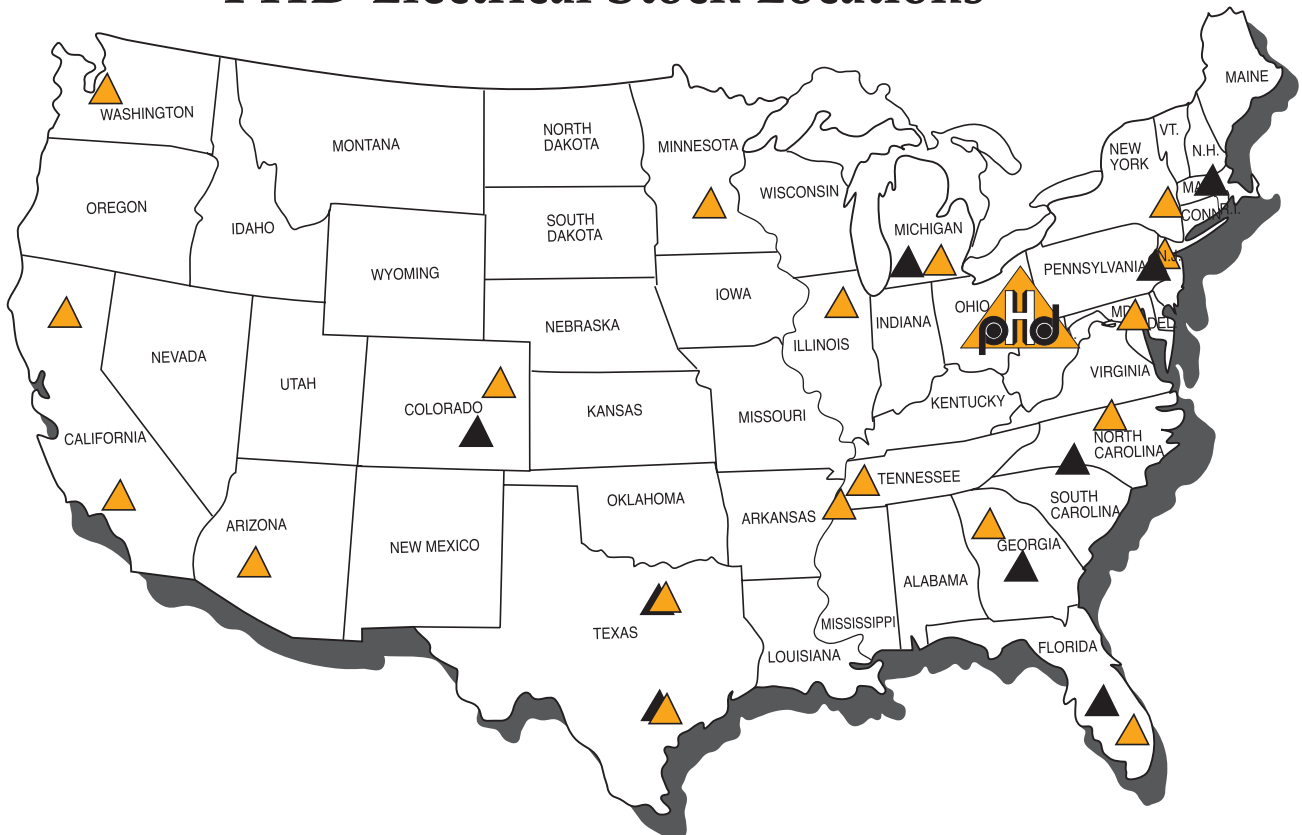

PHD Manufacturing, Inc. was founded in 1972 by a group of industry veterans with strong management, financial, sales and manufacturing backgrounds. The entrepreneurial vision of this close group used the talents they acquired over the years to forge something special in a business that needed a different purpose. This core group continues to manage PHD today, ensuring the original commitment to quality and excellence.

Our 33 professional sales representatives supporting the plumbing, mechanical and electrical industries are ready to serve your needs. Our manufacturing plant in Columbiana, Ohio, together with our 24 stocking warehouses throughout the United States, gives us one of the largest inventories in the industry.

Many of our products are Underwriter's Laboratories listed and Factory Mutual approved. All PHD products are manufactured to meet or exceed industry standards set for their design and manufacture.

If you need a product not listed in this catalog, please call the factory or your local PHD representative to check availability and pricing.

# ADJUSTABLE SWIVEL RING HANGERS

**FUNCTION:** Designed for the suspension of non-insulated stationary pipe lines. The knurled insert nut that allows a vertical adjustment after installation, is tapped to NFPA reduced rod size standards. Fig. 141F has a layer of felt which separates the pipe from the hanger to reduce vibration and sound.

**APPROVALS:** Underwriters' Laboratories Listed in the U.S. (UL), Canada (CUL), for use with standard steel pipe sizes 3/4" to 8" and CPVC pipe sizes 3/4" - 4". Factory Mutual Approved for sizes 3/4" to 8". Complies with Federal Specifications A-A-1192A (Type 10), and Manufacturers' Standardization Society ANSI/SP-69 and SP-58 (Type 10).

**Note:** If ordering Fig. 141F felt lined hangers for pipe sizes of 3 1/2" or under, order the next largest size to allow for the thickness of the felt lining.

**FUNCTION:** Designed for the suspension of non-insulated stationary pipe lines. The PVC coating on Fig. 143 protects the pipe from contact with the metal surface of the hanger. Frequently used with Aluminum, Glass, Plastic, Brass or Copper pipe lines. This product is NOT compatible with CPVC pipe.

**APPROVALS:** Underwriters' Laboratories Listed in the U.S. (UL), Canada (CUL), and Factory Mutual Approved for sizes 3/4" to 8". Complies with Federal Specifications A-A-1192A (Type 10) and Manufacturers' Standardization Society ANSI/SP-69 and SP-58 (Type 10).

# INSULATION SHIELDS

**FUNCTION:** Designed for the suspension of insulated pipe lines. Fig 155 is a combination of our Fig. 160 shield welded to a Fig. 151 hanger, which ensures that the shield will be installed in conjunction with the hanger. Fig. 155 allows vertical adjustment after installation and offers maximum protection from crushing of the insulation by the hanger.

**MATERIAL:** Low carbon steel

## Fig. 155 ADJUSTABLE SWIVEL RING HANGER WITH SECURED INSULATION SHIELD

**Note:** All shields furnished with flared ends.

**FINISH:** Pre-galvanized

**FUNCTION:** Designed to provide maximum protection to the insulation. The centering ribs are spaced to center the hanger on the shield, providing equal load distribution. The shield is furnished with flared ends to prevent it from cutting into the insulation.

**ORDERING:** Specify shield number and figure number.

# SHIELD SELECTION GUIDE

## SHIELD SELECTION GUIDE

For Fig. 155, 160, 170 & 455

**TO DETERMINE PROPER SHIELD SIZE FOR SIZES NOT LISTED:**  
 Add 2 times the thickness of the insulation plus the O.D. of the pipe. Select shield with I.D. no smaller than the sum total of pipe and insulation.

**INSULATION PROTECTION SHIELD**

*Note:* 12" length shields furnished with flared ends.

**FUNCTION:** Designed for use in the suspension of insulated pipe lines to protect the insulation from being crushed by the hanger.

**APPROVALS:** Complies with Federal Specifications A-A-1192A (Type 40) and Manufacturers' Standardization Society ANSI/SP-69 and SP-58 (Type 40).

**MATERIAL:** Low Carbon Steel

**FINISH:** Pre-galvanized

**ORDERING:** Specify shield number and figure number.

Available in stainless steel. To order, specify 304 or 316 and add suffix SS to figure number.  
Price on request.

*Note:* To determine proper size consult shield selection guide on page 28.

\* Available in stainless steel. To order, specify 304 or 316 and add suffix SS to figure number.  
Price on request.

**FUNCTION:** Designed for the suspension of non-insulated stationary pipe lines. Fig. 180F has a layer of felt which separates the pipe from the hanger to reduce vibration and sound. The PVC coating on Fig. 183 protects the pipe from the metal surface of the hanger.

**APPROVALS:** Complies with Federal Specifications A-A-1192A (Type 7) and Manufacturers' Standardization Society ANSI/SP-69 and SP-58 (Type 7).

**MATERIAL:** Low carbon steel

**ORDERING:** Specify pipe size and figure number.

*Note:* Use of an upper locknut ensures proper performance. If ordering felt lined hangers for 3 1/2 pipe or less, order the next largest size to allow for the thickness of the felt lining.

## Fig. 182 COPPER TUBING BAND HANGER

Available in stainless steel. To order, specify 304 or 316 and add suffix SS to figure number.  
Price on request.

**FUNCTION:** Designed for the suspension of non-insulated stationary copper tubing. When proper adjustment has been obtained, the hanger should be locked in place with an upper locknut.

**APPROVALS:** Complies with Federal Specifications A-A-1192A (Type 7) and Manufacturers' Standardization Society ANSI/SP-69 and SP-58 (Type 7).

**MATERIAL:** Low carbon steel

**FINISH:** Copper color epoxy finish

# BEAM CLAMPS

- FUNCTION:** Designed for attaching hanger rod to the bottom flange of a beam. The hanger rod should make contact with the beam flange to ensure full engagement.
- APPROVALS:** Underwriters' Laboratories Listed in the U.S. (UL) for  $3/8$ " and  $1/2$ " sizes only. Factory Mutual Approved for  $3/8$ " rod size only. Complies with Federal Specifications A-A-1192A (Type 23) and Manufacturers' Standardization Society ANSI/SP-69 and SP-58 (Type 23) (Approvals are only for Fig. 250 with locknut).
- MATERIAL:** Low carbon steel with hardened steel cup point set screw
- FINISH:** Plain or Electro-galvanized
- ORDERING:** Specify rod size, finish and figure number.

TOP BEAM CLAMP**

**FINISH:** Electro-galvanized  
**ORDERING:** Specify figure number.

**FUNCTION:** Designed for use with Fig. 350 and Fig. 360 to offer more secure fastening of beam clamps to beam where seismic protection is provided.

**APPROVALS:** Underwriters' Laboratories Listed in the U.S. (UL) and Canada (CUL) for  $\frac{3}{8}$ " and  $\frac{1}{2}$ " rod sizes only. Meets NFPA13 requirements for hangers and fasteners subject to earthquakes.

**MATERIAL:** Low carbon steel

**FINISH:** Electro-galvanized

**ORDERING:** Specify rod size, length, finish and figure number.

**NOTE:** 2 inches should be added to beam flange width to determine length.

# BEAM CLAMPS

**Fig. 350  
BEAM CLAMP**

**FUNCTION:** Designed for attaching hanger rod to the top flange of a beam or bar joist, where the flange thickness does not exceed  $\frac{3}{4}$  inch. The open U design permits rod adjustment. The universal design of the  $\frac{3}{8}$ " Fig. 350 allows it to be used in an inverted position on the bottom flange of a beam as well.

**APPROVALS:** Underwriters' Laboratories Listed in the U.S. (UL), Canada (CUL), for all sizes. Factory Mutual Approved for rod sizes  $\frac{3}{8}$ " and  $\frac{1}{2}$ " only. Complies with Federal Specifications A-A-1192A (Type 19) and Manufacturers' Standardization Society ANSI/SP-69 and SP-58 (Type 19). Fig. 350 sized for  $\frac{3}{8}$ " rod can be used in an inverted position (bottom of beam) and follows the same U.S. (UL), Canada (CUL), and Factory Mutual Approvals. Used in this manner the  $\frac{3}{8}$ " Fig. 350 also complies with Federal Specifications A-A-1192A (Type 23) and Manufacturers' Standardization Society ANSI/SP-69 and SP-58 (Type 23) (Approvals are only for Fig. 350 with locknut).

# CLEVIS HANGERS

CLEVIS HANGER**

“D” Adjustment  
(Top of cross bolt to bottom  
of hanger rod nut.)

**FUNCTION:** Designed for the suspension of non-insulated stationary pipe lines in applications where protection from corrosive environments is desired. Frequently specified for areas requiring the ultimate in sanitation. Another benefit includes a reduction of long term maintenance costs, due to the corrosive resistant properties of stainless steel.

**APPROVALS:** Complies with Federal Specification A-A-1192A (Type 1) and Manufacturers’ Standardization Society ANSI/SP-69 and SP-58 (Type 1).

**MATERIAL:** Type 304 stainless steel clevis, cross bolt and nut

**NOTE:** Available in type 316 stainless steel.

**FINISH:** Plain

**ORDERING:** Specify pipe size, figure number, and type.

# CLEVIS HANGERS

**FUNCTION:** Designed for the suspension of insulated stationary pipe lines. The elongated design permits the insulation to encompass the hanger, while maintaining a clearance between the insulation and the cross bolt. This allows the installation of the insulation to be more economical due to the fact that less cutting and fitting is required.

**APPROVALS:** Complies with Federal Specification A-A-1192A (Type 1) and Manufacturers' Standardization Society ANSI/SP-69 and SP-58 (Type 1).

**MATERIAL:** Low carbon steel

**FINISH:** Plain

**ORDERING:** Specify pipe size and figure number. Available in stainless steel. To order, specify 304 or 316 and add suffix SS to figure number. Price on request.

# CLEVIS HANGERS

**FUNCTION:** Designed for the suspension of non-insulated stationary pipe lines. Fig. 450F has a layer of felt which separates the pipe from the hanger to reduce vibration and sound. The PVC coating on Fig. 453 protects the pipe from the metal surface of the hanger.

**APPROVALS:** Underwriters' Laboratories Listed in the U.S. (UL) and Factory Mutual Approved for 2 1/2" to 8" only. Complies with Federal Specifications A-A-1192A (Type 1) and Manufacturers' Standardization Society ANSI/SP-69 and SP-58 (Type 1).

**MATERIAL:** Low carbon steel

**ORDERING:** Specify pipe size and figure number.

**Note:** When an over-sized clevis is used, a pipe spacer should be placed over the clevis bolt to prevent the lower U-strap from moving inward.

# PIPE ROLLER SUPPORTS

**Fig. 460**  
**PIPE ROLLER CHAIR**

**FUNCTION:** Designed for supporting pipe in applications where horizontal movement, due to expansion and contraction, will occur but vertical adjustment is not necessary. The chair can be welded directly to the steel structure or secured in place through bolt holes.

**APPROVALS:** Complies with Federal Specifications A-A-1192A (Type 44) and Manufacturers' Standardization Society ANSI/SP-69 and SP-58 (Type 44).

**MATERIAL:** Cast iron pipe roller with low carbon steel chair, axle and hex nuts.

**FINISH:** Plain or Electro-galvanized

**SIZING:** Pipe roller size shown is for bare pipe. For proper sizing with insulation, refer to pipe roller selection guide on page 49, which is for use with pipe covering protection saddles.

**ORDERING:** Specify pipe roller size and figure number. Order mounting bolts separately.

# PIPE ROLLER SUPPORTS

**FUNCTION:** Designed for suspending pipe in applications where horizontal movement, due to expansion and contraction, will occur and vertical adjustment is necessary. The knurled insert provided with Fig. 475 allows easier vertical adjustment.

**APPROVALS:** Complies with Federal Specifications A-A-1192A (Type 43) and Manufacturers' Standardization Society ANSI/SP-69 and SP-58 (Type 43).

**MATERIAL:** Cast iron pipe roller with low carbon steel frame, axle and hex nuts.

**FINISH:** Plain or Electro-galvanized

**SIZING:** Pipe roller size is for bare pipe. For proper sizing with insulation, refer to pipe roller selection guide on page 49, which is for use with pipe covering protection saddles.

**ORDERING:** Specify pipe roller size and figure number.

# PIPE ROLLER SUPPORTS

**FUNCTION:** Designed to support pipe in applications where horizontal movement, due to expansion and contraction, will occur and a vertical adjustment is required. The roller assembly is attached by means of the threaded support rods and locked in place after correct alignment with the hex nuts provided.

**MATERIAL:** Cast iron pipe roller with low carbon steel rod with four hex nuts.

**FINISH:** Plain or Electro-galvanized

**SIZING:** Pipe roller size shown is for bare pipe. For proper sizing with insulation, refer to pipe roller selection guide on page 49, which is for use with pipe covering protection saddles.

# PIPE ROLLER SUPPORTS

**Fig. 490  
PIPE ROLLER  
WITH SOCKETS**

- FUNCTION:** Designed to suspend pipe in applications where horizontal movement, due to expansion and contraction, will occur.
- APPROVALS:** Complies with Federal Specifications A-A-1192A (Type 41) and Manufacturers' Standardization Society ANSI/SP-69 and SP-58 (Type 41).
- MATERIAL:** Cast iron pipe roller and sockets with low carbon steel axle
- FINISH:** Plain or Electro-galvanized
- SIZING:** Pipe roller size shown is for bare pipe. For proper sizing with insulation, refer to pipe roller selection guide on page 49, which is for use with pipe covering protection saddles.
- ORDERING:** Specify pipe roller size and figure number.

# PIPE CLAMPS

**FUNCTION:** Designed for the suspension of high temperature pipe lines. The increased material and bolt sizes allow Fig. 526 to be used in applications where heavier loads will be encountered. Normally used in conjunction with Fig. 35 weldless eye nut or Fig. 55 welded eye rod to allow flexibility at the rod attachment. The clamp can be used with up to 4 inches of insulation and temperatures up to 750° F.

**APPROVALS:** Complies with Federal Specifications A-A-1192A (Type 3) and Manufacturers' Standardization Society ANSI/SP-69 and SP-58 (Type 3).

**MATERIAL:** Low carbon steel

**FINISH:** Plain or Electro-galvanized

**ORDERING:** Specify pipe size and figure number.

Available in stainless steel.  
To order, specify 304 or 316 and add suffix SS to figure number.

# RISER CLAMPS

**FUNCTION:** Designed for supporting and stabilizing vertical pipe runs. The PVC coating on Fig. 553 protects the pipe from the metal surface of the clamp. This product is not intended for use with hanger rods. Clamp is designed for standard iron pipe O.D. and must be considered when sizing other types of piping.

**APPROVALS:** Underwriters' Laboratories Listed in the U.S. (UL) and Factory Mutual Approved for sizes  $\frac{3}{4}$ " to 8" only. Complies with Federal Specifications A-A-1192A (Type 8) and Manufacturers' Standardization Society ANSI/SP-69 and SP-58 (Type 8).

**MATERIAL:** Low carbon steel

**ORDERING:** Specify pipe size and figure number.

### Installation practice for Model 550 Riser Clamps

When possible the clamp should be placed under a coupling, hub or welded lugs on steel pipe. Bolt torques should be per industry standards.

**FUNCTION:** Designed to be used in the suspension of a hanger rod from an I-Beam. The clamp is adjustable from 3½ to 8" and can be used with flange thicknesses up to .75 inches.

**APPROVALS:** Complies with Federal Specifications A-A-1192A (Type 27) and Manufacturers' Standardization Society ANSI/SP-69 and SP-58 (Type 27).

**MATERIAL:** Low carbon steel

**FINISH:** Plain or Electro-galvanized

**ORDERING:** Specify rod size and figure number.

Available in stainless steel.  
To order, specify 304 or 316 and add  
suffix SS to figure number.  
Price on request.

**FUNCTION:** Designed to protect insulation on high temperature pipe lines. The saddle is furnished with notches to minimize surface contact with the pipe, thereby keeping heat loss to a minimum.

**APPROVALS:** Complies with Federal Specifications A-A-1192A (Type 39) and Manufacturers' Standardization Society ANSI/SP-69 and SP-58 (Type 39).

**MATERIAL:** Low carbon steel

**FINISH:** Plain or Electro-galvanized

**ORDERING:** Specify pipe size, insulation size and figure number.

# PIPE ALIGNMENT GUIDES

**FUNCTION:** Designed for use with insulated or non-insulated pipe lines to direct the axial expansion and contraction of the pipe. The use of two or more guides on both sides of the expansion joint is recommended to avoid a pivoting effect. The first pipe guide should be placed a maximum of 4 pipe diameters from an expansion joint. Pipe guides are not designed to support any of the piping system's weight therefore additional supports are required. The maximum operating temperature should not exceed 750°F.

**MATERIAL:** Carbon Steel

**FINISH:** Painted

**ORDERING:** Specify pipe size and figure number.

# PIPE SLIDE ASSEMBLY

**FUNCTION:** Designed to be welded directly to the pipe to allow for support from below and allow for horizontal movement with a low coefficient of friction.

The assembly consists of a carbon steel tee with a polished stainless bottom which rests on a PTFE (glass filled teflon) plate, bonded to a carbon steel plate. The base plate configuration will vary with the Type selected.

**Maximum temperature:** 200°F at the sliding surface.

Greater height dimensions, longer transverse and longitudinal movements, and other customer requirements can be supplied upon request.

**APPROVALS:** Complies with Federal Specifications A-A-1192A (Type 35) and Manufacturers' Standardization Society ANSI/SP-69 and SP-58 (Type 35).

**MATERIAL:** Carbon Steel, Stainless Steel, PTFE.

- Fig. 950 Plain
- Fig. 951 Electro-galvanized
- Fig. 950N Plain insert nut
- Fig. 951N Electro-galvanized insert nut

**FUNCTION:** Designed to be embedded in concrete to provide a means of suspending pipe from ceilings. The insert is held in place by nailing it to the forms, until the concrete is poured. The insert comes with a snap-out plug to keep the inner housing clean during pouring of the concrete. After the concrete has set, the plug is removed, exposing the inner housing. The rod should be tightened until it touches the top of the insert, but should not be forced further to avoid damage to the insert.

**APPROVALS:** Complies with Federal Specifications A-A-1192A (Type 18) and Manufacturers' Standardization Society ANSI/SP-69 and SP-58 (Type 18).

**MATERIAL:** Low carbon steel

**ORDERING:** Specify figure number. If insert nut is required order separately, include the rod size and figure number.

																		OR TRAPEZE		

*Note:* Spacing and capacities are based on pipe filled with water. Additional valves and fittings increase the load and therefore closer hanger spacing is required.  
Taken from MSS ANSI/SP-69 and SP-58 Table 3 & 4.

\*Many Codes and specifications require pipe hangers to be spaced every 10 feet regardless of size. Check local codes.

# FINISHES

## ZINC COATING

PHD offers 3 basic forms of zinc coating on its products:

- 1) **Electro-Plated Zinc** (Electro-galvanized)
- 2) **Pre-Galvanized Zinc**
- 3) **Hot Dipped Galvanized**

**Note:** The corrosion resistance of zinc is based on its thickness, the environment and the coating process used.

For best results, a zinc rich paint should be applied to field cuts. The zinc rich paint will provide immediate protection for these areas and eliminate the short time period for galvanic action to "heal" the damaged coating.

### Zinc offers two types of protection:

- **Barrier:** The zinc coating protects the steel substrate from direct contact with the environment
- **Sacrificial:** The zinc coating will protect scratches, cut edges, etc. through an anodic sacrificial process.

### ELECTRO-PLATED ZINC (ASTM B633 SC1 & SC3)

This type of coating is recommended for use indoors in relatively dry areas. The steel is submersed in a bath of zinc salts, through the process of electrolysis, a coating of pure zinc adheres to the steel with a molecular bond. A maximum of .5 mills of zinc can be applied using this method.

SC1 (Mild) has a Zinc coating of 0.2 MIL and is recommended for dry indoor use. SC1 is the standard finish thickness. SC3 (Severe) has a Zinc coating of 0.5 MIL.

### PRE-GALVANIZED ZINC (ASTM A653 COATING G90)

This type of coating is suitable for extended exposure in dry or mildly corrosive atmospheres but not generally recommended for use outdoors in industrial environments. Also known as "mill galvanized" or "hot-dipped mill galvanized", pre-galvanized zinc coatings are produced by rolling the steel coils or sheets through molten zinc, at the steel mill, the material is then cut or slit to size. Zinc near the uncoated edges or weld areas becomes a sacrificial anode which protects the bare areas.

The pre-galvanized zinc coating conforms to a G-90 thickness designation per ASTM A653. The zinc thickness is .75 MIL or .45 oz/sq ft of surface area.

### HOT-DIP GALVANIZED (ASTM 123)

Recommended for prolonged outdoor exposure and will usually protect steel in most atmospheric environments. After fabrication the part is immersed in a bath of molten zinc. A metallurgical bond is formed resulting in a zinc coating that coats all surfaces including edges. Please note that some items cannot be hot-dipped galvanized due to design, tolerances or threaded components. Check with the PHD factory or your local representative when questionable. Threaded components on hot dipped galvanized products will be electro-plated.

The zinc coating is typically 2.6 MIL or 1.5 oz/sq ft of surface area.

As shown in the graph at left, when the zinc coating is double, the service life is double under most conditions.

Comparison of Zinc Finishing	
Finish	Zinc Thickness
Hot-Dip Galvanized	2.6 MIL
Pre-Galvanized	0.75 MIL
Electro-Galvanized (SC1)	0.2 MIL
Electro-Galvanized (SC3)	0.5 MIL

# FINISHES

Plain finish designation means that the channel retains the oiled surface applied to the raw steel during the rolling process. The fittings have the original oiled surface of the bar stock material.

## PLAIN

PHD offers two types of primer coatings:

- 1) Red Primer
- 2) Yellow Primer

Both can be used indoors or outdoors and offer a degree of protection from the elements. These coatings are also used in applications where painting of the metal is desired.

## PRIMER COATING

PVC coating helps reduce noise and protect the pipe or tubing from the metal surface of the hanger. Corrosion resistance protection is minimal.

## PVC COATING

PHD offers a variety of epoxy finishes in both commercial or military grades that offer a high degree of corrosion resistance. Contact factory for more detailed information.

## EPOXY COATING

Designed for use with copper tubing. This coating provides a better level of corrosion resistance than the traditional copper plated finish. It also acts as a protective barrier, avoiding contact between dissimilar metals. The copper color epoxy powder is applied by an electrostatic method, and the coated parts are baked at 180 degrees for 20 minutes.
